

THE EARTH ANCHOR

THE STEALTH EARTH ANCHOR

The 'Stealth' earth anchor is available in five sizes, covering a wide range of lightweight anchoring requirements.

They are easy to install using simple hand or power tools and are extremely effective when working in restricted spaces.

THE BAT EARTH ANCHOR

The 'BAT' earth anchor has been specifically designed to achieve higher loads and also to enhance anchoring in poor soil conditions.

Designed to accept the T-Loc lower termination, the main advantage to this design is the flexibility it gives to on-site anchor system assembly and its ability to accept a wide range of wire tendon / rod combinations.

The range consists of four sizes and generally requires more powerful equipment for installation.
